By this and the former *Regal Table* may easily be found the Year of each Kings Reign corresponding to the Year of our Lord, always remembering to begin the Year of our Lord on March 25.

Example, I have a Deed bearing Date the 17th of May, in the Two and Twentieth Year of the Reign of King *Charles* the Second, but the Year of our Lord is omitted; I desire to know in what Year of our Lord this Deed was made.

I find by this Table that the beginning of the Two and Twentieth Year of King *Charles* the Second's Reign was in 1669; but I cannot find here what Month his Reign began in; wherefore I turn to the first *Regal Table*, and find there that he began his Reign the 30th of January, 1649. from whence I conclude, that the 17th of May in the first Year of his Reign must be in the Year of our Lord 1649. which proves by consequence that the 17th of May in the Two and Twentieth Year of his Reign must be in the Year of our Lord 1670.

*Magistrates in the University of Oxford:***D**UKE of Ormond, Chancellor.

Earl of Clarendon, Steward.

Dr. Lancaster, Vice-Chancellor.

Dr Edwards,

Dr Charlett,

Dr Painter,

Dr Gardiner.

Pro-Vice-Chancellors.

Mr Carter, Mr Crank, Proctors.

*Professors, &c. in the University.***Q**UEENS Professor of Divinity, Dr Jane.

Law, Dr Bouchier. Physick, Dr Hoy.

Hebrew, Dr Altham. Greek, Dr Hody.

Margaret Professor, Dr Winn.

Savilian Professor of Geometry, Mr Halley.

Astronomy, Dr Gregory.

Professor of Arabick, Mr Wallis.

Natural Philosophy, Dr Fairer.

History, Dr Aldworth.

Moral Philosophy, Mr Adams.

Metaphysicks, Mr Bicklee.

Grammar, Mr Swinsfeld. Logick, Mr Crank.

Rhetorick, Mr Newton.

Chymistry, Mr Frewen.

Botany, Mr Bobart. Musick, Mr Goodson.

Publick Orator, Mr Wyat.

Head Library-keeper, Dr Hudson.

Under Library-keepers, Mr Crabb, Mr Hearn.

Keeper of the Archives, Dr Gardiner.

Keeper of the Museum, Mr Lloyd.

Assessor in the Vice-Chancellors Court, Dr Wood.

Register of the same Court, Dr Woodward.

Register of Convocation, &c. Mr Cooper.

(55)

A Table, shewing how many Bishopricks are in both Provinces: how many Counties in every Bishoprick: how many Cities, Market-Towns and Parishes are in every County: and how many Knights and Burgeses are sent to Parliament out of every County both in England and Wales.

Of the Eclipses this Year.

THis Year will happen six Eclipses, whereof one of them will be visible here in England.

The first will be a small Eclipse of the Sun on the 22d of *March*, about Sun-setting,

The second will be a total and visible Eclipse of the *Moon*, on *April 6*. The greatest Obscuring will be about half an hour after one in the morning, and may be seen, if the Air be clear.

The third will be a small invisible Eclipse of the Sun, on *April 21*, about two in the morning.

The fourth is a small invisible Eclipse of the Sun, on *September 14*, about midnight.

The fifth will be a great but invisible Eclipse of the Moon, and falls on the 30 of *September* about noon.

The sixth Eclipse will be of the Sun, on the 14 of *October*, that will also be invisible.

On *July* the 9th. this Year, will happen a famous Conjunction of *Jupiter* and *Mars* in *Virgo* and by reason they are Evening-stars, and of difference of Latitude but little, they will seem to touch one another almost, and will be worth observing.

 Musick, *Thursday* 1 afternoon.

Dr. Gregory's Method for Teaching Mathematicks.

Without discouraging any other person in the University that teaches or intends to teach Mathematicks; at the desire of persons of note, he undertakes to teach the different parts and sciences of the Mathematicks (by way of Colleges and Courses) after the manner following.

If any number of Scholats desire him to explain to them the Elements (or any of the Mathematical Sciences, if they are already acquainted with

with the Elements) He will allow that Company
 such a time, as they amongst themselves shall
 agree upon, not less than an hour a day, for
 three days in a week; in which time he will
 go through the said Science; explaining the pro-
 positions, and illustrating them with examples,
 operations, experiments, or observations, as the
 matter shall require, until the Company appre-
 hend and understand it: And there shall be full
 liberty to every Person of the Company to pro-
 pose such doubts or scruples as he pleaseth.

And because some may be desirous to give an
 account of their proficiency; for their own sa-
 tisfaction and that of their friends, he will once
 a week examine such as shall signify that they are
 willing to be examined.

The Courses or Colleges that he thinks of most
 ordinary use, are these:

I. The First Six Books, with the Eleventh
 and Twelfth Books of *Euclid's Elements*.

II. The plain Trigonometry; where is to be
 shewed the contraction of natural Signs, Tangents,
 and Secants, and the Table of Logarithms as well
 of natural Numbers as of Signs, &c. The practi-
 cal Geometry, comprehending the Description
 and Use of Instruments, and the manner of Mea-
 suring Height, Distances, Surfaces and Solids.

III. *Algebra*, wherein is taught the method
 of resolving, and contracting plain and solid
 Problems; as well Arithmetical as Geometrical,
 or Diophantine Problems.

IV. *Mechanicks*, wherein are laid down the
 Principles of all the Sciences concerning motion,
 the five Powers (commonly so call'd) explain'd,
 and the Engines in common use, reducible to
 those Powers describ'd.

V. *Catoptricks* and *Dioptricks*; where the
 Effects

Effects of Mirrors and Glasses are shewed, the manner of Vision explained, and the Machines for the helping and enlarging the Sight (as Telescopes, Microscopes, &c.) described.

VI. The Principles of Astronomy, containing the Explication of all the most obvious Phenomena of the Heavens, from the true System of the World, and the Generation of the Circles of the Sphere thence arising. Here also is to be taught the Doctrine of the Globes, and their Use ; with the Problems of the first motion by them resolved. After this is to be demonstrated the Spherical Trigonometry, and the application thereof to Astronomy shewed, in resolving the Problems of the Sphere by calculation, and the contraction of the Tables of the first motions depending on this.

VII. The Theory of the Planets, where the more recondite Astronomy is handled that is, the Orbits of the Planets determined by observation, the Tables for Motions described ; the methods of construsting them taught ; and the Use of these Tables shewed ; as finding the Planet's places, the Eclipses of the Luminaries, &c. Many of these Courses may be farther carried on, as the particular Inclinations of a Classe lead them. For example, subjoined to the practical Geometry may be a Lecture of Fortifications, so far as is necessary for understanding it, without actually serving in an Army, or fortifying a Town or Camp. Under the head of Mechanicks, there may be (if desired) Colleges of Hydrostaticks, with all the experiments thereunto belonging ; of the Laws of Communication of Motion, whether the Bodies be hard or elastick ; of the Gravities of the Bodies, lying on inclined plains ; of Balisticks, or the Doctrine of Projecticks, as Bomb

&c. of the Doctrine of Pendulums and their application to the measuring of Time (after the principles of Astronomy or the sixth College) may be prosecuted, the Doctrine of the Sphere projected in *plano*, or the Analemma or Astrolabes and Dialling; as also Navigation, and so of others. But tho' he shall always be ready to grant the request of those who desire his instruction in these or any other parts of Mathematical Learning, or in reading upon or explaining any Mathematical Book; He thinks that after all or most of the fore-mentioned seven Colleges; one may by his own study proceed, as his occasions require; and he shall very readily give his advice concerning their Studies, and the choice of Books for that purpose. For the rest to be explained, and to give occasion for the necessary digressions in the foresaid Colleges, he will take a printed Book, if any there be, that is proper. In other cases he will take care in time, to give those of the Classe proper notes to be written by them. He intends not by the preceding order, to tie up his Colleges to that order, for after the Elements, at least after the five first Colleges (or being acquainted with them before) they may choose what other they please, but the seventh next plainly supposed the sixth. In all these, he supposeth, one is pretty well acquainted with the numerical Arithmetick: And if they desire regular demonstrations of the operation of Integers or Fractions, vulgar or decimal; any Classe shall have it when they please. He reckons that any one of these Colleges will require about three months, a little more or less; and that the number of Scholars proper for such a Classe, be not less than eight, or more than twelve.

*A College or Course of Mechanical and
Experimental Philosophy, performed by
Mr. John Keill of Christ Church.*

The Course consist of three Parts.

IN the First are contained, 1. The Principles of the *Mechanicks*, the *Contrivance* of *Engines*, and the way of estimating their *Force*. 2. The *Laws* of *Nature*, and all the common *Appearances* which easily flow from them. 3. The *Centrifugal Force* of *Bodies* moving in a *Circle*, and several *properties* that arise from thence. 4. The particular *Laws* of *Motion*, the *Rules* of *Congression* of *Hard* and *Elastick* *Bodies*. 5. The *Acceleration* of heavy *Bodies*, the *Reason*, *Rules*, and *Proportion* of this *Acceleration*, their *Descent* upon *inclined Planes*, the *Motion* of *Pendulums*, their *Equability*, and their *Application* to *Clocks* for *Measure* of *Time*. All this shown and proved by *Experiments*.

The Second Part is upon the Nature of *Fluids* which contains, 1. The Principles of *Hydrostatics*, the *Pressure* of *Fluids* on *Fluids*, their *Respective* *Absolute Gravitation* rationally and experimentally demonstrated, the various *Immersion* of *Bodies* in *Fluids*, and the Method of examining the *Specifick Gravities* shown. 2. The *pressure* of *Air*, and the *Effects* of it declared. 3. A Description of *Weather-Glasses*, viz. several of *Barometers*, *Thermometers*, and *Hygrometers*. Description and *Contrivance* of *Water-Engines* and lastly a great variety of *Experiments* by the *Air-pump*.

The Third Part is concerning *Opticks*, w

The general Properties of *Light* are shown. 2. An
 account of *Images* made by *Mirrors*, *Plane*, *Con-*
ave, and *Convex* and the several *Phænomena* that
 arise from their various *Combinations*. 3. The *Re-*
fraction of *Light* entering different *Mediums*, and
 the various *Appearances* of *Objects* seen through such
Mediums, and *Multiplying-Glasses* are explained,
Converse-Glasses are explained, and shown: As
 to an Account of their *Magnifying*, and *Force*
Burning when exposed to the Sun. 5. A *De-*
scription of the *Eye*, the Use of its *Parts*, and
 manner of *Vision*, the *Faults* of *Vision* in old and
 blind Men, and how they are to be rectified
Convex and *Concave Glasses*, or *Spectacles*, are
 demonstrated. 6. *Microscopes*, single and double;
lescopes of two or three or four *Glasses*, and
 other *Optical Machines*, as the *Magick Lanthorn*, the
projection of *Images* in a dark room, &c. are shown,
 and the reason of all those *Appearances* given.

Chancellors since Q. Elizabeth.

John Mason. 1559.
 Robert Dudley Earl of Leicester. Dec. 31. 1564.
 Christopher Hatton L. Chancell. Sept. 20. 1588.
 Thomas Sackvill, Ld. Buckhurst, Dec. 17. 1591.
 Rich-Bishop Bancroft. Apr. 27. 1608.
 Thomas Egerton, Ld. Keeper, Nov. 3. 1610.
 William Herbert Earl of Pembroke Jan. 29. 1616.
 Wm. Laud. Bp. of London, aft. Arch-Bp. of Can-
 terbury. Apr. 12. 1630.
 Herbert Earl of Pembroke, July 1. 1641.
 John Marquis of Hertford, Oct. 31. 1643.
 Philip. Earl of Pemb. Feb. 1647. }
 Oliver Cromwell, Jan. 1. 1650. } Rebellion.
 Richard Cromwell, July 18. 1657. }

Will.

Will. Marquess of Hertford Restor'd, June 5. 1660.
Edw. Hyde Earl of Clarendon Ld. Ch. Off. 27. 1660.

Publick Benefactors; mentioned in the Prayer before Latin Sermons at the beginning of every Term; on Act-Sunday; and before the Judges.

Humphry Duke of Gloucester, Founder of the old University Library, A. D. 1427.

John Kemp Arch Bishop of Canterbury, Benefactor to the Old Library.

Thomas Kemp Bishop of London, Benefactor to the same Library.

Margaret Countess of Richmond, Mother of Henry VII. Founder of the Margaret-Professor's Place. 1502.

King *Henry VII.* and *Elizabeth* his Queen gave a Pension out of the Exchequer.

Ferdinand Ld. Pagott Benefactor to the Margaret Professor, 1613.

Richard Litchfield Arch-deacon of Middlesex Benefactor to St. Mary's Church.

Thomas Wolsey Cardinal and Arch-Bishop of York, Founder of several Lectures.

King *Henry VIII.* Founder of the Royal Professor's Places.

Queen *Mary I.* gave 3 Rectories, 1554.

Queen *Elizabeth* gave a large Charter of Privileges, &c.

King *James I.* gave a Prebend of Shipton in Salisbury to the Professor of Civil Law, 1617. to the Professor of Physick, the Government of the Hospital of Ewelme, 1617. to the Professor of Divinity a Prebend of Ch. Ch. and Rectory of Ewelme, 1605.

Thomas Bodley Kt. Founder of the Publick Library, Nov. 8. 1602.

Henry Savill Kt. Warden of Merton and Provost of Eton, Founder of the Astronomy and Geometry Lectures, 1619.

William Sidley Kt. and Baronet of Elsford in Kent, Founder of the Natural Philosophy Lectures, 1621.

Nicholas Kemp Kt.

Thomas White Dr. of Divinity and Canon of C. Ch. Founder of the Moral Philosophy Lecture, 1621.

William Camden Esq; Clarencieux, Founder of the History Lecture. 1622.

King *Charles I.* Martyr gave to the Margaret Professor a Prebend of Worcester, 1627. To the Hebrew Professor, a Prebend of Christ-Church. 1636.

William Laud Arch-Bishop of Canterbury, Founder of the Arabick Lecture, &c. 1636.

Gilbert Sheldon, Founder of the Theater.

Other Benefactors.

William Hether Doctor of Musick, Founder of the Musick Lecture, 1626. E 2 Ri-

Richard Thomlins, Esq; Founder of the Anatomy Lecture, 1623.

Henry Danvers Earl of Danby, Founder of the Physick-Garden, and a Botanick Lecture, 1640.

Sir Edwin Sandys, Founder of a Metaphysick Lecture 1629.

*Chief Benefactors to the Publick Library,
the Museum, the Press, &c.*

1. *Thomas Sackville* Earl of *Dorset* and Chancellor of the University.

2. *William Herbert* Earl of *Pembroke*, who gave the *Baroccian* Collection of Greek MSS.

3. *Oliver Cromwell* and *Sir Thomas Row*, who made an addition to the said Collection.

4. *Sir Kenelm Digby*, who gave 233 MSS. in various Languages.

5. *William Laud* Arch-bishop of *Canterbury*, who gave at several times 1300 MSS. and a valuable Collection of Coyns.

6. *John Selden* Esq; whose Library was added to the *Bodleian* by *John Vaughan*, and *Matthew Hale* Lords Chief Justices, and *Roland Jucker*, Esq;

7. *Sir Thomas Fairfax* Baron of *Cameron*, who gave *Mr. Roger Dodsworth's* Collections, consisting of upwards of 150 Volumes, and several other valuable MSS.

8. *Francis Junius*, who gave a great number of MSS. relating to the *Septentrional* Languages, mostly of his own composing; with a great quantity of curious Letters, which he had cast on purpose to print them with.

9. *Thom...*

9. *Thomas Marshal*, Rector of *Lincoln*, and Dean of *Glocester*, and *Thomas Barlow* Provost of *Queen's* and Bishop of *Lincoln*, who gave the University all the Books in their own Studies, which were wanting in the Publick Library, and the rest to *Lincoln* and *Queen's* Colleges.

10. The University, who gave all the MSS. of *Dr. Edward Pocock*, Hebrew Professor; *Dr. Robert Huntingdon* Bishop of *Rapho*; and *Dr Edward Barnard* Professor of Astronomy, 1693.

11. *Elias Ashmole* Esq; *Windfor*-Herald, who was Founder of the Natural History Lecture, and Donor of the Collection of the Rarities commonly call'd *John Tredescar's* Collection, in the *Ashmolean Museum* or *Repository*: And who gave a noble Collection of Coyns Antient and Modern, and likewise several Books relating to *English* History and natural Philosophy.

12. *Sir William Dugdale*, who bestowed a great many MSS. of Heraldry, &c. on Mr. *Ashmole's Museum*.

13. *Dr. John Fell* Bishop of *Oxford*, who may justly be stiled the Founder of the Press, to which he left in *Letters*, *Punchions*, *Matrices*, &c. to the value of near 2000 *libs*.

14. *Henry Howard* Brother to *Thomas Howard* Duke of *Norfolk* and Earl of *Arrundel*, who gave the Antient Marbles in the Theatre Yard, which are described by Mr. *Selden* and *Dr. Prideaux*.

15. *William Freke* of *Hannington* in *Wilts*, who gave a curious Cabinet of Antient and Modern Coyns: Which Collection has been since augmented by Mr. *Timothy Nourse* of *University College*, and *John Ray* Esq; late Consul of *Smyrna*.

16. *Ant. a Wood*, who left to the Museum all his printed Books which were wanting there, and a considerable number of MSS. mostly relating to the Antiquities of *Oxford*.
Lately

Lately Printed at the *Theatre*.

of *Edm. Hall*.

Orders for Prices of Oxford Carriers.

WHereas the Carriers between the Uni-
versity of *Oxford*, and the City of *Lon-*
don, to the great Prejudice of the Members of the
said University, and others, have for divers years
last past exacted what Rates they pleased for the
Carriage of Goods and Letters, (and have aggra-
vated this their Unreasonable Practice by requir-
ing greater Sums from Scholars, than Towns-
men contrary to the Charters, and Antient Privileg-
es of the said University, and to the Orders
prescribed to them in the year 1666.

For the Prevention of these, and other abuses
and Irregularities for the future, it is therefore
now ordered, that henceforth they, their Ser-
vants, and Porters, shall demand, or receive no
greater Rates than such as are hereafter expressed :

- I. For the Carriage of *One Hundred Weight*
of Goods, from the Feast of *All Saints*
to the Feast of *Annuntiation*, or *Lady-*
day, four Shillings. And for the rest
of the Year, three Shillings and Six
Pence.
- II. For the Carriage of any *Person* by Waggon
Four Shillings.
- III. For the Carriage of the *Greatest Parcel*
(all being to be esteemed *Parcels* under
one quarter of an Hundred Weight)
One Shilling : And so less in proportion
for those that are less ; except that for
the Carriage of a single *Hat* and *Case*
Nine Pence.
- IV. For the Carriage of any *Burden*, not
exceeding one Hundred Weight, nor
less than one quarter of a Hundred
Weight from the Shop or Warehouse
where the Goods were unladen, unto the
Owners Habitation, or Shop, Three
Pence : And for a *Parcel*, One Penny.
- V. All Letters directed to Scholars shall be
left at the Butteries of their respective
Colleges or Halls ; and for the Delivery
of every such Letter, shall be given only
one Half penny Loaf, as was accus-
tomed. But if any Carriage comes with a
Letter, nothing shall be given for the
bringing of the Letter.
- VI. Moreover, it is hereby strictly Ordered,
that all ordinary Stage-Coaches travel-
ling

...ing between the said University and
City of *London* in two Days, shall respec-
tively set from *Oxford*, at, or before
the Hour Nine in the Morning by
Mary's Clock ; And shall in like manner
set forth from *London*, so as to pass
St. *Giles's* Church in the Suburbs, at
before the same Hour, by the Clock
the same Church : And in all other
Points, the Carriers are to take care
that Passengers be conveyed to the
respective Stages, safe, and in Season-
able Time.

If any thing, contrary to the forementioned
Orders, shall be hereafter practised by any of the
said Carriers, let the Offenders expect to undergo
due Punishment ; and also to make Satisfaction
to the Party injured, according to Right and
Justice.

And that all Persons concerned (whether Inhab-
itants in *Oxford*, or elsewhere) may be better
advised of the Contents hereof, it is required
that the respective Carriers do openly and Pub-
lickly in their common Ware houses, within the
said University of *Oxford*, and City of *London*
paste up Printed Copies of these Presents ; and
from time to time renew the same, if by any
means they shall happen to be defaced or re-
moved.

Carriage by *Water* is to be estimated after the
Rate of *One Shilling* for every Hundred Weight
Ralph Bathurst. Nov. 24 1674.
